LED MIRRORS

EFFICIENT SOURCE OF LIGHTING

LED mirrors provide full illumination and highlight your entire space with clear and even lighting. Choosing Eurofase LED mirrors is a simple way to add a touch of elegance, sophistication, and boldness.

More than just a bathroom accessory, our mirrors can be placed in various other areas. Try using them to elevate a foyer, bedroom, dressing room, bathroom, or hospitality setting.

SOMETIMES, TO SEE THE LIGHT,
YOU ONLY NEED TO SLIGHTLY
CHANGE THE PERSPECTIVE

BENEFITS

WHY CHOOSE LED?

Eurofase LED mirrors make a bold statement while showcasing modern elements, merging form and function in a brilliant way. Undeniably sleek and displaying high-tech flair, our mirrors are equipped with integrated LED technology for seamless illumination and energy efficiency.

Quality LED lights are safer, sturdier and last longer than other lights. Using or switching to LED lighting generates energy savings by reducing the amount of energy needed. LED lights are 300% more efficient than fluorescent bulbs and 1,000% more efficient than incandescent bulbs. They have a long operational life that can last approximately up to 11 years before needing to be replaced.

Generating almost no warmth, LED lights are much cooler to the touch reducing accidental burns and can be left on for hours. LEDs are much more durable withstanding even the roughest conditions. Designed to focus its rays by emitting light in a specific direction, LEDs reduce the need for reflectors and diffusers that can trap light.

With all these benefits, packed into our smart mirrors, it's hard to avoid this clear cut choice. Easily boost comfort and productivity of your space with a Eurofase LED mirror.

CCT TCC CCT

Correlated color temperature (CCT) defines the color appearance of a white LED. Color temperature is specified in Kelvin. Depending on its CCT, the light will either be classified as warm, neutral, or cool.

Light your space with carefully crafted mirrors that house an integrated touch screen for correlated color temperature options. With dimmable capabilities, our LED mirrors are soft enough to serve as a night light and bright enough for full daytime illumination.

From a warm white to cool white, you can customize your lighting for specific uses and see things under a new light with just a touch of a finger. The ability to control light color allows for better viewing and clarity as colors appear differently under different lighting conditions.

LIGHT CLASSIFICATION

WARM

NEUTRAL

COOL

AMBIANCE

Areas that need low light intensity for a cozy, calm, inviting and intimate space

Light intensity applications for bright and vibrant mood

Special applications that need high light intensity and good color rendition for a crisp and invigorating space

EFFECTS ON COLORS

- Enhances reds & oranges
- Blues appear darker
- Orange/yellow tint to whites and greens

- Enhances most colors equally
- Does not favor yellow or blue
- Neutral appearance

- Enhances blues
- Flattens reds
- Bluish tint to whites and greens

NO SHADOWS

Regular fixtures in bathrooms often create shadows on our face and make it difficult to see yourself fully illuminated. A back-lit mirror will provide full illumination and highlight your entire face with clear and even light. That is why LED back-lit mirrors are a top choice for makeup artists and hairstylists.

STYLE

Choosing a Eurofase LED mirror is a simple way to add a touch of elegance, sophistication, modernity, and minimalistic style to your space. We carry a variety of mirrors to suit every need ranging from cabinets, free-standing, tri-folds and standard mirrors with an array of styles to suit your space.

FEATURES

KEY ASSETS

ROCKER SWITCH

A rocker switch is a spring-loaded electrical on/off switch that rocks back and forth. Our waterproof on/off switch offers 3 states: off, 3000K, and 4000K.

TOUCH SENSOR SWITCH

A touch sensor switch is one of the simplest kinds of tactile sensors, sensitive to touch, force or pressure. An integrated touch switch controls on/off states as well as dimmable .

MIRROR IMAGE

Mirrors form perfect images unless they are imperfectly constructed. At Eurofase we use high quality mirrors made of distortion free glass for clarity.

DURABILITY

Bathrooms typically generate a lot of steam and moisture. This is why it is important to incorporate mirrors that prevent those spotty unattractive edges like our copper free mirrors which counteracts black edge corrosion.

CCT

CCT OPTION

Correlated color temperature (CCT) is the term used to reference the color of light. All our mirrors come with CCT or the option to add it and can be accessed with the touch of a finger. Available in 3000K, 4500K, and 6400K.

CUSTOMIZATION

OPTIONAL FEATURES

BLUETOOTH SPEAKER

Create an engaging environment by adding a Bluetooth speaker to your LED mirror. Easily connect a cell phone to answer a call or play music.

DEFOGGER

A demister device removes liquid droplets and leaves a designated area clear with heated pads to dispel fog effortlessly. Getting ready will be a breeze even after a warm shower.

DIGITAL CLOCK

Never be late again! A built-in digital clock eliminates the need for multiple devices. 12 and 24-hour systems are available.

MAGNIFIER

Improve image clarity with a built-in magnifying glass with custom 3x or 5x magnification. LED light shines from a frosted ring for added brilliance.

TELEVISION/MONITOR

Don't skip a beat during your morning routine and watch the news or your shows while you get ready in the bathroom. Upgrade to the Android system for the touch screen and more functions.

Please note that some television options are limited due to technical specifications.

GLASS SHELF (MIRRORED CABINET)

Add a custom glass shelf if more storage space is required. Available in transparent or sandblasted (frosted) glass.

GILDING

TECHNIQUE

WHAT IS METAL LEAF

Metal leaf is a thin metal sheet that is used for decoration and is available in gold, copper and silver. It is used on varying sized objects from a small glass to large frames for added luxury.

LUXURY IS AN ART

Gilding (metal leaf application) is a delicate process that requires specialized tools. It requires skill and technique for a flawless finish.

Some tools required for this process are a gilding cushion, a gilding knife, an adhesive and pumice powder. A clean surface, a room without any drafts and lots of patience are also key elements for successful application. Once applied properly and depending on how much handling they get, the gold foil can last for centuries.
